

A scatter plot showing the relationship between REF_force (x-axis) and PRED_force (y-axis). The x-axis ranges from -40 to 40, and the y-axis ranges from -40 to 40. A dashed red line represents the identity line (y=x). The data points are blue circles, showing a strong positive correlation, with most points clustered around the identity line, indicating high predictive accuracy.

A scatter plot showing the relationship between 'REF force' (x-axis) and 'Predicted force' (y-axis). Both axes range from -30 to 35. The data points are blue circles, and a dashed red line represents the linear regression. The points are tightly clustered around the line, indicating a strong positive correlation.
